

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A hand-utility interface for use in protecting a user's hand during utility tasks comprising a foamed block body having a plurality of foam finger-receiving channels defined therein; and palm support means for securing said interface to the palm of a user's hand with the underside of the user's hand retained against the foamed block body, the palm support means comprising one or more resilient yokes, wherein the foam finger-receiving channels snugly receive the fingers of said user's hand such that in use, the palm support means and foam finger-receiving channels secure the interface to the user's hand.
2. (currently amended) A hand-utility interface according to claim 1, wherein the body defines a uniform work surface.
3. (currently amended) A hand-utility interface according to either of claims 1 or 2, wherein the foamed block body comprises visco-elastic foam material.
4. (previously presented) A hand-utility interface according to claim 1, wherein finger-retaining means are provided to one or more of the foam finger-receiving channels.
5. (withdrawn) A hand-utility interface according to claim 4, wherein said finger-retaining means comprise tabs over hanging said one or more finger—receiving channels.
6. (previously presented) A hand-utility interface according to claim 4, wherein said finger-retaining means comprise finger grips provided to the one or more foam finger-receiving channels.

7. (previously presented) A hand-utility interface according to claim 1, wherein the foamed block body is symmetric in form such as to be suitable for ambidextrous use.

8. (cancelled)

9. (previously presented) A hand-utility interface according to claim 1, wherein said one or more resilient yokes comprises hinged parts movable from an open to closed configuration.

10. (withdrawn) A multi-layer form cleaning cloth comprising (a) an absorbent cloth layer; (b) adjacent to said absorbent cloth layer, a perforate layer comprising at least partly non-transparent material; and (c) adjacent to said perforate layer, a fluid impermeable layer comprising at least partly a transparent material, said fluid impermeable layer joining to said perforate layer such that a reservoir for receipt of cleaning media is defined, wherein the non-transparent perforate layer is visible through the transparent liquid impermeable layer when the reservoir is empty of cleaning media.
